

VACANCY FOR A SR. ADVISOR WAREHOUSE & LOGISTICS SYSTEMS ENGINEERING

About Groenewout

Groenewout is a leading logistics consultancy firm focused on the development and implementation of logistics and supply chain operations. Our customers range from medium-sized enterprises to multinationals. We are active throughout the whole of Europe, although a significant proportion of our projects are connected to the Benelux region. Our offices are in Breda. For more details of our areas of specialization and for references, please see our website: www.groenewout.com.

(Senior) Advisor Warehouse & Logistics Systems Engineering

Groenewout offers you the unique opportunity to participate in the entire process, from design up to the implementation of a European logistics operation. Within these projects, you have a large degree of independence and responsibility. This guarantees plenty of variety, since you are active within many different companies and sectors. You are assured of developing new knowledge and expertise thanks to your colleagues, who between them have more than 150 years of logistics and supply chain-related experience. Their backgrounds vary from mathematics, business engineering and logistics to civil engineering. The salary and benefits package reflects the level of the position and includes a profit-sharing and bonus scheme.

Requirements

The ideal candidate is an enthusiastic individual with a bachelor's degree in industrial engineering/management, civil engineering or mathematics with a specialization in logistics and mechanized systems. Your heart lies with conceptual problem analysis and devising pragmatic solutions. An affinity with and experience within companies in the field of logistics services, retail and e-commerce logistics is preferred.

You have extensive demonstrable experience of executing logistics studies and implementing projects. You are an expert in the areas of high-quality mechanized warehouse technology and warehouse automation and you have experience in the planning, design and integration of complex logistics systems. You must be able to analyze flows of materials and information within logistics and manufacturing environments using tools that have been developed in-house, and you must also be successful at translating your analysis into practical solutions. Knowledge of design and visualization tools such as Visio, Autocad and Tarakos is an advantage. In view of our international client base you must be able to express yourself clearly and convincingly in Dutch and English, both verbally and in writing. A professional, commercial mindset is essential, and teamwork is by definition an important element of this role.

Tasks

You will be working at the heart of the logistics and supply chains operations of high-profile clients such as Bol.com, DHL, Heineken, Liberty Global, etc. Your tasks revolve around conducting logistics studies for (new) warehouses, distribution centers and production facilities, developing warehouse design concepts and supervising the implementation of Groenewout's recommendations. You act as a logistics project manager on behalf of our clients, you maintain intensive contact with suppliers and you take care of project coordination. For the duration of each project you are the first point of contact for the client, you coordinate the logistics and transport processes and you ensure that the suppliers deliver on their guarantees. You also advise the client on essential and desired organizational changes to ensure optimal functioning of the system following implementation and to provide the client with insight into future developments. Furthermore, you assume the role of mentor to coach fellow consultants. Last but not least, you cooperate with national and international publications and network events and are involved with business development in your area of expertise.
