

VACANCY CONSULTANT FACILITIES

About Groenewout

Groenewout is a leading logistics consultancy firm focused on the development and implementation of logistics and supply chain operations.

Our customers range from medium-sized enterprises to multinationals. We are active throughout the whole of Europe, although a significant proportion of our projects are connected to the Benelux region.

Our offices are in Breda. For more details of our areas of specialization and for references, please see our website: www.groenewout.com.

Consultant facilities

Groenewout offers you the unique opportunity to participate in the entire process, from design up to the implementation of a European logistics operation. Within the projects, you have a large degree of independence and responsibility. This guarantees plenty of variety, since you are active within many different companies and sectors.

You are assured of developing new knowledge and expertise thanks to your colleagues, who between them have more than 150 years of logistics and supply chain-related experience. Their backgrounds vary from mathematics, business engineering and logistics to civil engineering. The salary and benefits package reflects the level of the position and includes a profit-sharing and bonus scheme.

Role

You are directly involved in the design and realization of (European) distribution centers and fulfillment centers for nationally and internationally leading companies. You work together with clients to prepare specifications and advise them on the right decisions. [Click here for Groenewout project references.](#)

You put your financial and technical expertise to good use in negotiations with project developers. During the construction phase, you monitor the project developer and/or contractor to ensure that our customer receives the agreed standard of quality.

Internally, you are also involved in logistics studies, whereby you contribute to discussions about the internal logistics layout from a construction perspective. Within such a team, you are responsible for ensuring that the technical construction aspects of the building are in line with the interior plans so that sprinklers, lighting and floor loads, for example, are optimally aligned with the logistics equipment such as racking.

Requirements

The preferred candidate is an enthusiastic individual with an educational background (Bachelor or University degree) in mechanical and/or electrical engineering or equipment installation. However, we also invite applications from candidates with a background in civil engineering or construction.

You have several years of experience as a multidisciplinary project manager in the construction sector or as designer/engineer at an engineering firm. Project management is second nature to you. Experience with logistics and/or manufacturing facilities is a clear advantage. But even without this experience, we invite candidates to respond.

In view of our international client base you have an excellent standard of proficiency in Dutch and English, both orally and written, which enables you to express your thoughts with the necessary conviction. Furthermore, a good level of proficiency in the German language is an advantage. A professional, commercial mindset is essential.
